YOUR WELLBEING IS PRECIOUS.  
LIKE OUR WATERS.

For **health, beauty and relaxation** Riccione Terme has three features which make it unique: its precious **sulphurous and salso-bromo-iodic waters** with magnesium, the Adriatic sea and the Town of Riccione.

The beating heart of Riccione Terme is the **spa water, sulphurous** and unique on the coast of Romagna.

A water rich in elements harmoniously combined by Nature, with acknowledged therapeutic properties **all treatments here are carried out with flowing water from its own springs.**

The spa establishment, located in a **luxuriant park** overlooking the Adriatic sea, offers therapies and treatments, which make use of avant garde medical technologies to offer the best care and personalised protocols.

THE "OASI SPA"  
WELLBEING CENTRE

Proposes **skin and body spa beauty treatments** where water and mud are enriched by active ingredients and essential oils which exhalt and diversify beauty benefits; massages and special packages.

THE SPA SENSORY PATH

**1500 sq m of emotions**, the ideal encounter between health and wellbeing with four **Spa Pools** at different temperatures with Whirlpools, the Venetian and Pompeian Grotto, Vascular path, Mushroom Waterfall, Infrared Personal relaxation, new **Chromatic and Sensory Paths**, Aquafitness, Rituals and massages in the relaxation room.

## INHALATION TREATMENTS AND TREATMENTS FOR RHINOGENOUS HEARING LOSS

Sulphurous salso-bromo-iodic water with magnesium from Riccione Terme **stimulates the immune system** and carries out an **anti-inflammatory, mucolytic, decongestant and analgesic** action, carrying out a **reduction in the symptoms and visible effects related to the illness**, in chronic pathologies or relapses.

Adults and children benefit from this in pathologies affecting the **nose and throat, ears and bronchi**.

## MUD-BATHING THERAPY

Represents the chosen therapy for **Arthro-rheumatic** pathologies and a valid tool in **post-traumatic recovery**. Spa mud carries out an **analgesic** and **anti-inflammatory** action and affects the immune response of the body, making it more resistant.

At Riccione Terme, every mud and bath session, is finalised with exposure to **infra red lamps** the specific wavelength of which produces a decontracting and muscle **relaxant effect amplifying the results of the treatment**.

## BALNEOTHERAPY

Thanks to a high content of salts and electrolytes, balneotherapy carries out an **anti-inflammatory** action on the **osteoarticular apparatus**, useful in the presence of **arthrosis, traumas and contractures**.

## WHIRLPOOL BATHS FOR FLEBOPATHY AFTER-EFFECTS

are particularly effective in all the forms of **venous insufficiency**, venous stasis, post-phlebitic syndromes.

## DERMATOLOGICAL BATHS

are suitable for the treatment of several skin diseases of allergic and immunological origin such as **psoriasis, dermatitis and eczema**.

## REHABILITATION AND PHYSICAL THERAPIES

Spas are the **ideal place** to carry out rehabilitation sessions and **recover functionalities** compromised by traumas, interventions, chronic pathologies of the locomotor apparatus such as arthrosis and osteoporosis and neuromotor issues. **Hydrokinesitherapy in spa water** favours floating, and releases muscle tensions and has an anti-inflammatory and sedative effect on pain.

Furthermore, on completion of the rehabilitation path, modern **electromedical** devices can be used, among which Tecar, Laser, Ultrasounds, Tens, Iontophoresis, as well as **physiotherapy massages** and **kinesitherapy**.
